

Acknowledgements

I would like to thank my supervisors at the University of Nottingham Prof. Martyn Davies and Prof. Morgan Alexander and Dr. Alex Shard from the National Physical Laboratory for their continual support of my development and for providing me with challenges to tackle. They have been an inspiration which have nurtured an appreciation of the field I expect to continue in. I would also like to acknowledge the BBSRC and NPL for funding my studentship.

The assistance of the Laboratory of Biophysics and Surface Analysis over the years is greatly appreciated, especially that of David Scurr. I would like to acknowledge Molecular Profiles Ltd. and the tissue engineering group for access to their instrumentation and formulations respectively.

My parents and sister I would like to thank for their support and encouragement over the years through thick and thin.
