INVESTIGATING THE ROLE OF
LEARNING MENTORS IN PRIMARY SCHOOLS

JEAN BUTTERFIELD, M. Phil., B. Ed. (Hons)

Thesis submitted to the University of Nottingham
for the degree of Doctor of Education (Educational Leadership)

JULY 2012

ABSTRACT

This thesis is the result of an investigation into the use of the learning mentor support mechanism in primary schools in England. Learning mentoring is designed to reduce barriers to learning in individual children. This research was devised to enhance current knowledge of the learning mentor process and practices, and the impact of mentoring programmes on pupils.

The research approach I adopted was qualitative, involving six case studies of children being mentored in three schools. The research design included part-structured interviews with: the child; his/her mentor; class teacher and parent. Interviews were undertaken before and after the execution of learning mentor programmes. Additional data were generated by direct observation of the interaction of learning mentors and mentees, and documentary evidence was examined. Each case study was analysed and cross-case and cross-setting analyses undertaken.

Improvement for the participant mentees was related to social, emotional and behavioural factors. The learning mentor role was not always clearly defined but reflected the culture of each school, the personal characteristics of each mentor and the specific relationships within each mentor/mentee pair. Mentoring programmes were unique to each mentee's needs. Impact was slow in all six cases and was found to be facilitated or hindered by: relationships; time; the mentor undertaking multiple roles; and the expectations of the wider school staff of the school setting.

The significance of my analysis stresses the importance of the triangle of influence of the child/school/parent in aiding a child in school. Aspects of mentoring which could be more closely attended to by schools in order to provide best learning mentoring practice were: mentors identifying their strategies; the mixing of curriculum with social/emotional/behavioural targets; liaison with families; communication with the wider school staff; and the involvement of mentees in setting and monitoring their own mentoring goals.

Mentoring styles centred on the mentor, curriculum or the mentee and related to the leadership styles identified in the school settings.

ACKNOWLEDGEMENTS

I would like to thank Professor Andrew Hobson for tutoring me in the research for, and writing of, this thesis. I also sincerely thank Dr Bernadette Youens who kindly accepted the tutorship of the final few months of this work and supported me to its completion.

I am grateful for the cooperation of the three schools and the participation of the sample of adults and children who made this research possible. I also appreciate the support, patience and love of my husband, through often arduous study times, and of Tess and Susie who also accompanied me faithfully through this research journey.
